

# GLOBAL CONFERENCE FOR A NUCLEAR POWER FREE WORLD

The Global Conference for a Nuclear Power Free World, held at Pacifico Yokohama on January 14-15, 2012 brought together experts, activists, survivors and concerned citizens from Fukushima, Japan, and the world to develop means both to assist the survivors of the March 2011 nuclear disaster at Fukushima Daiichi Plant in their struggle for justice, and to ensure that the world never has to suffer another nuclear tragedy.

## PARTICIPATION:

6000 people gathered at the conference on the first day and 5500 on the second, including 100 international participants from over 30 countries, to reach a total of 11,500 participants. The conference was broadcast live over the internet, with an audience of approximately 100,000.

## ACHIEVEMENTS:

• The Conference adopted the **"Yokohama Declaration for a Nuclear Power Free World"** (see overleaf). The Yokohama Declaration calls for:

- 1) Protection of the rights of those affected by the Fukushima nuclear power plant accident;
- 2) Responsibility of the Japanese Government and the Tokyo Electric Power Company (TEPCO);
- 3) Minimisation of residents' exposure to radiation;
- 4) A global road map for the phase out of the nuclear fuel cycle and the decommissioning of all nuclear power plants;
- 5) The permanent closure of those Japanese nuclear power plants currently shut-down;
- 6) The prohibition of export of nuclear power plants and components, especially to industrialising nations;
- 7) An emphasis on the role of local and municipal authorities; and declares to develop a **global network to support Fukushima**.

It also calls for **action to be taken throughout the world on 11 March 2012**.

• The diverse proposals for action made by conference participants are being gathered on a web site entitled the **"Forest of Action for a Nuclear Power Free World."** These many proposals include a range of levels, from recommendations to governments to suggestions of what individuals can do, and this web site provides a forum to develop concrete future actions.  
<http://npfree.jp/forest-of-action/>

• The **"Declaration by Three Hundred Eleven Representatives for A Nuclear Free East Asia"** was also introduced at the conference; and it was announced that 100 people from both Korea and Japan have already endorsed this declaration. The 311 Declaration will be officially announced on the coming 11 March, forming an East Asian action network centred in Japan, China and Korea. [http://www.npfree.jp/download/EastAsai311Declaration\\_EN.pdf](http://www.npfree.jp/download/EastAsai311Declaration_EN.pdf)

• Eight current and former mayors, including two from Fukushima, joined the the Mayors' Forum which was held as a special session at the conference. Here, the decision was taken to form a **network of mayors to work to break free from nuclear power**, and announced that a preparatory meeting for this network will be held in late February 2012. The Yokohama Declaration supports this proposal, and calls for citizens' support of this initiative.

## ORGANIZATION:

The conference was coordinated by an Organizing Committee comprised of six Japanese NGOs, with Peace Boat as Secretariat. Many other organizations also cooperated in the coordination of programmes throughout, and the conference was supported by a large number of endorsing organizations and corporations, and supporting organizations. A list of these groups is available on the conference website.

A key theme of the conference was promoting active participation, and more than 100 groups also held self-organized events at the conference, including around 20 organizations from Fukushima, and several international groups including from Australia, Germany, Sweden and Taiwan. A further characteristic of the conference was a diverse range of participatory workshops and opportunities for exchange, including in the Fukushima Room and children's programmes. A total of 500 volunteers, many of them students and youth, played an enormous role in the conference operations. Evacuees from Fukushima also participated as volunteers.

GLOBAL CONFERENCE FOR A NUCLEAR POWER FREE WORLD

## 2012 YOKOHAMA

### YOKOHAMA DECLARATION FOR A NUCLEAR POWER FREE WORLD

The 11 March 2011 earthquake, tsunami and related melt down at the Fukushima Daiichi nuclear power plant has led to great suffering for the people of Japan and has increased radioactive contamination across the globe. It has also sounded a warning bell throughout the world about the long-term health, environmental and economic risks of nuclear power.

As with Three Mile Island and Chernobyl, the accident at Fukushima has reminded us once again that nuclear technology is unforgiving and accidents cannot be contained. The situation is not under control as declared by the Japanese Government. The nuclear power plant is still unstable and workers continue to work under life-threatening conditions.

Radioactive contamination is spreading. This is a regional and global emergency. People are either forced to flee with their children or live with unacceptable health dangers and prolonged radiation exposure. In Fukushima prefecture, evidence of radioactive material has been found in the breast milk of mothers and the urine of children. Lives are threatened, including those of future generations. The regional economy has been destroyed.

Every step in the nuclear fuel chain has created Hibakusha, a term initially used to describe survivors of the Hiroshima and Nagasaki bombs, but now used for all victims of radiation exposure. Uranium mining, nuclear weapons testing, accidents at nuclear power plants, and the storage and transport of nuclear waste have all created Hibakusha.

The experience of these Hibakusha around the world is one of secrecy, shame and silence. The right to information, health records, treatment and compensation has been inadequate or denied with excuses of "national security" or due to cost. This lack of accountability is not limited to Japan, but is a problem fundamentally present in the nuclear industry everywhere due to the corrupt relationship between governments and the nuclear industry.

We now stand at a crossroads. We have the choice to break out of the nuclear fuel chain and move towards efficient, renewable and sustainable energy that does not threaten health or environment. For the sake of future generations, it is our responsibility to do so. Turning away from nuclear energy goes hand in hand with nuclear weapons abolition, and will contribute to lasting world peace.

The global solidarity shown towards the people of Fukushima and the spirit of those gathered at the Yokohama Global Conference for a Nuclear Power Free World demonstrates that connections between people are truly what will create the foundations for our future.

#### We call for:

- 1. The protection of the rights of those affected by the Fukushima nuclear power plant accident;** including the right to evacuation, health care, decontamination, compensation and the right to enjoy the same standard of living as before 11 March 2011;
- 2. Full transparency, accountability and responsibility of the Japanese Government and the Tokyo Electric Power Company (TEPCO)** and the establishment of an independent body to disseminate information to the public to reverse the history of concealing information from the public and releasing contradictory information.
- 3. Ongoing comprehensive data collection and radiation measurement of humans, food, water, soil and air** to inform the urgent and necessary measures to minimise the populations exposure to radiation. Data collection will be necessary for generations and inter-agency governmental undertakings and the support of the international community are required. Corporations that have profited from the nuclear industry should carry their share of the costs.
- 4. A global road map for the phase out of the nuclear fuel chain – from uranium mining to waste – and the decommissioning of all nuclear power plants.** The 'safety myth' has been destroyed. Nuclear technology has never been safe and has never survived without massive public subsidies. Renewable energy is proven and ready to be deployed on a decentralised and local scale if only policies to promote it were advanced to support local economies, such as Feed-in-Tariffs.
- 5. Currently closed Japanese nuclear power plants to not be reopened.** Japan's energy needs can be met by implementation of policies including the Feed-in-Tariff law that has been adopted and the structural separation of ownership of transmission and production of energy.
- 6. The prohibition of export of nuclear power plants and components, especially to industrialising nations in Asia, the Middle East, Africa and Europe.**
- 7. Support for local and municipal authorities that play an important role in creating a society not dependent on nuclear power.** We encourage solidarity between local municipal leaders, regional parliamentarians and civil society to promote strong communities, decentralization, bottom up approaches and an end to economic, racial and gender discrimination.
- 8. Actions, demonstrations, seminars and media events to be held throughout the world on 11 March 2012** to protest the treatment of the citizens of Fukushima and call for a nuclear power free world.

Based on the above principles, the participants of the Global Conference have launched the "Forest of Action for a Nuclear Power Free World", containing concrete plans for action. These many recommendations will be submitted as appropriate to the Japanese Government, governments of other nations, the United Nations Conference on Sustainable Development (Rio+20) and so on.

10,000 people came to the Global Conference for a Nuclear Power Free World in Yokohama, and 30,000 watched online. We, the participants are determined to maintain an international network to support Fukushima, cooperation among those affected by radiation through the Global Hibakusha Network, the establishment of the East Asia Non Nuclear Power Declaration Movement, and a network of local municipal leaders and mayors.

15 January 2012  
Declared at the Global Conference for a Nuclear Power Free World  
Yokohama, Japan

This Declaration was drafted by the Organizing Committee of the Global Conference for a Nuclear Power Free World, and is supported by participants from around the world.
